

# B-lock<sup>2</sup>

 **FERNO**<sup>®</sup>

## Technical Data

Weight	1,6 kg	1,9 lbs
Width	300 mm	11,8 inch
Thickness	190 mm	7,5 inch
Height	165 mm	6,5 inch

## Lateral Blocks

Width	85 mm	3,3 inch
Thickness	230 mm	9,1 inch
Height	150 mm	5,9 inch

## Certification

- **EN ISO 10993-17:2009** - TESTED AND CERTIFIED material that does not release hazardous substances when in contact with skin and sweat.
- **EN ISO 10993-18:2020** - Biocompatible material.
- **EN ISO 10993-5:2009** - Non-cytotoxic material.
- **EN ISO 10993-23:2021** - Non-irritating material for the skin.
- **SHELF-LIFE** of the device that prevents microbiological proliferation on the surface of the device.
- **COMPLIANT WITH THE NEW MDR REGULATION**

B-Soft, B-Safe, B-lock!

## Head Immobilizer B-lock2

Lightweight, compact, and easy to apply. **Entirely manufactured in Italy**, the B-lock2 ensures complete and secure immobilization of the patient's head. When used in combination with the Ferno WizLoc cervical collar, it provides safe and comfortable transport for the patient.

The B-lock2 head immobilizer is equipped with two lateral blocks, a "K" strap, and a "T" strap, allowing for quick immobilization.

The absence of velcro surfaces on the base and lateral blocks makes the device cleaner and easier to disinfect.

Enhanced comfort: The B-lock2 material is **SOFT TOUCH**, providing a better contact experience with the face as it adapts optimally to its shape.

**TESTED:** The material, **100% recyclable**, does not release any hazardous substances when in contact with the skin.

The B-lock2 head immobilizer is made of a thermoplastic material with an **ANTIBACTERIAL ADDITIVE**, which prevents microbiological proliferation and improves hygienic storage conditions.

The head immobilizer base, in addition to providing stability to the lateral blocks, features an integrated V-shaped QHI that enhances comfort and ensures correct head positioning on the base.

**SIMPLE AND OPTIMAL SANITIZATION**

The **ELLIPTICAL ERGONOMIC OPENINGS** on the lateral blocks of the B-lock make positioning the head immobilizer easier. This allows for direct contact with the patient, providing greater comfort around the ear area when subjected to immobilization pressure.

**Tested and biocompatible according to ISO 10993 standard.**

Using the new "K" strap and "T" strap, the B-lock2 can be secured to the stretcher for **PERFECT IMMobilIZATION** of the patient.
