part no. 10-1605-001

no. 1 Set of Wiz Loc collars
CONTAINING 3 PCS
part no. 0822074

MAIN FEATURES

- Designed for spine immobilization and for the **safe extrication of patients from vehicles or small spaces**.
- It can be used for technical rescue operations in difficult environments (water and mountains) thanks to the Pro and Floating kits.
- Designed to perform **quick extrication** and **precautionary extrication** operations in a safe way for the operator.
- The **4 safety restraints**, two on the chest in crossed configuration and two on the groin, allow to immobilise the patient without compressions, ensuring the maximum comfort and safety.
The buckles have different colours for immediate identification and fast application.
- The **4 red lifting and carrying handles** allow a steady and ergonomic grip by the operator and ensure an efficient extrication of the patient.
- The **QHI-B Quick Head Immobilizer** guarantees an effective head-cervical spine immobilisation, thanks to the combination with the neoprene triangular head immobiliser.
- Extremely lightweight thanks to its structure in carbon composite fibre.
- Always ready for use, it comes in a convenient carry bag.
- Easy to sanitise.
- Compatible with non-traumatic stretchers, spinal boards and vacuum mattresses.

XT

WARNING: If you already have an XT, you can update it to the PRO version thanks to the special kit.

XT Pro part no. XT PRO

CONTENT: no. 1 carbon board, no. 1 Kit Pro, no. 1 QHI, no. 1 carry bag, no. 1 Triangular head immobiliser.

The human lift kit allows vertical rescue in small spaces.

The device keeps the patient posture on the rescue line, considerably reducing the handling space.

Configuration speed is ensured by the single tape that facilitates patient lifting.

The Quick Head Immobilizer (QHI-B) allows the operator to efficiently immobilise the head-cervical spine area of the patient

IMMOBILISER, NEOPRENE STRAP**
part no. QHI-B-N

Human LIFT

- Restraint system tested in accordance with EN1498
- Restraints with Cobra buckles - capacity 9 kN (917 kgf) made of aluminium alloy 7075
- Hanging rings - capacity 22 kN
- Leg hoops to ensure greater comfort

XT

XT Floating part no. XT FLOATING

CONTENT: no. 1 carbon board, no. 1 Kit floating, no. 1 QHI, no. 1 Triangular head immobiliser, no. 1 Special carry bag.

Xt floating is a kit designed to ensure extreme manoeuvrability and reliability during water rescue. The head float and the two side floats ensure an optimal patient support, preventing capsizing and protecting him or her from accidental impacts.

The layout of semi-rigid polyurethane floating tubes is conceived to **keep the patient with the head out of water.**

Buoyancy is greater than the one of a buoyancy vest. The **FAST CLIP** technology allows to fasten the floating system in a few seconds, thus considerably speeding up water rescue operations.

The Quick Head Immobilizer (QHI-B) allows the operator to efficiently immobilise the head-cervical spine area of the patient.
